SUMMARY

AI engineer who takes LLM agent systems from prototype to production: agent design, tool integration over MCP, evaluation and cloud deployment. Founded and led engineering at Gödel, an agent platform on AWS with three paying clients and A$100K ARR. My UQ honours thesis built a research agent that beats or matches published baselines on four benchmarks. Now building a city-scale transport twin with AI coding agents and tutoring deep learning at UQ.

EXPERIENCE

Founder and CTO, Gödel Apr 2025 – Dec 2025

godel.sh

- Led a three-person team building a platform for LangGraph-based Gödel agents (arXiv:2410.04444) from scratch to pilots, giving agents any software tool through the Model Context Protocol instead of a bespoke integration per tool.
- Won three paying clients and A$100K ARR through org-based usage: mail reception and CRM automation; a content marketing pipeline with automated outreach and feedback; and access-controlled handoff of knowledge from chats, meetings, client feedback and decisions.
- Ran it on AWS (ECS, EC2, Lambda, S3, DynamoDB), provisioned with Terraform and CDK, shipped via GitHub Actions.

AI Engineering Intern, AGAILE Inc. Jan 2025 – Mar 2025

Delaware, United States (remote)

- Prototyped a LangGraph question-answering assistant: crawled sites with Apify into a Milvus vector database on Docker, answered with RAG, and deployed it to LangGraph Cloud behind a chat client.

AI Solutions Intern, Segment X Jul 2024 – Dec 2024

St Lucia, Queensland, Australia

- Built LLM and RAG prototypes, data pipelines and workflow automations for client use cases, deployed on cloud infrastructure.

Tutor, The University of Queensland Jul 2026 – present · Jul 2023 – Dec 2023

St Lucia, Queensland, Australia

- COMP3710 Pattern Recognition and Analysis (2026): deep learning in PyTorch and TensorFlow. CSSE2002 Programming in the Large (2023): Java and software design.

PROJECTS

City digital twin Aug 2026 – present

github.com/praneetdhoolia/city-digital-twin · praneetdhoolia.github.io/digital-twins

- Built a transport twin of Greater Newcastle: 600,000 census-based synthetic residents travelling by twelve modes on real roads and timetables (OpenStreetMap, GTFS), simulated in MATSim with my own Java extensions, and scored against the real city.
- Stood up Mumbai (27 million residents) on the same framework in days; built both with AI coding agents (Claude Code) over 709 commits, with repository-enforced checks and cost-gated runs.
- Prepared a proposal for an Indian state government: a 3D map deck (MapLibre GL, deck.gl) replaying the twin's trips.

Contributor, langgraph-mcp · ***github.com/esxr/langgraph-mcp*** Dec 2024 – Jan 2025

- Co-built an open-source assistant (580+ GitHub stars) that routes requests across MCP servers: wrote its router graph, MCP session wrapper, assistant graph and Milvus retriever.

EDUCATION

Bachelor of Engineering (Honours), Software Engineering Feb 2022 – Jun 2026

The University of Queensland, St Lucia, Queensland, Australia

Honours thesis: Foundations of Agent-to-Agent Communication in a Software-Mediated Research Agent (praneetdhoolia.github.io/docs/thesis.pdf). Supervised by Dr Shakes Chandra.

- Designed a five-stage LangGraph research agent (planner, dispatcher, executor, assessor, synthesiser) with a streaming FastAPI backend, a Next.js interface and a dozen MCP tools.
- Scored 62.0% on SimpleQA (Claude 3.5 Sonnet: 28.9%), 87.0% on GAIA Levels 1 and 2, 61.45% on DRACO (OpenAI o3: 52.1%) and 68.0% on MCP-Atlas (GPT-5.2: 67.6%).

SKILLS

AI systems: LangGraph, Model Context Protocol (MCP), multi-agent systems, RAG, prompt engineering, agent evaluation

Cloud and deployment: AWS (Bedrock, EC2, ECS, Lambda, S3, DynamoDB), GCP (Cloud Run, BigQuery), Azure (App Service, Functions), Docker, Kubernetes, Terraform, GitHub Actions, LangGraph Cloud

Languages, ML and web: Python, Java, PyTorch, TensorFlow, FastAPI, Next.js, Playwright, Milvus, Apify

Simulation and geospatial: MATSim, SUMO, OpenStreetMap, GTFS, MapLibre GL, deck.gl
