

Praneet Dhoolia

Software Engineer — Multi-Agent Systems & LLM Applications

St Lucia, QLD, Australia | praneet@dhoolia.com | linkedin.com/in/praneet-dhoolia | github.com/praneetdhoolia | praneetdhoolia.github.io

SUMMARY

Software engineer specializing in multi-agent AI systems and LLM application development. Founded and led engineering for an agent platform (LangGraph + Model Context Protocol) from prototype to paying pilots, crossing A\$100K ARR. Hands-on experience across the full stack: RAG pipelines, vector retrieval, agent orchestration, and production deployment.

EXPERIENCE

Founder & CTO — Gödel Apr 2025 – Dec 2025

godel.sh

- Built the platform for creating LangGraph-based "Gödel agents" (arXiv:2410.04444), giving agents access to any software-based tool via the Model Context Protocol (MCP)
- Led full-stack development from a from-scratch prototype through org-based pilot deployments, growing usage to A\$100K ARR

Tutor — The University of Queensland Jul 2026 – Present

COMP3710 – Pattern Recognition and Analysis (Python, PyTorch, TensorFlow) · St Lucia, QLD

AI Engineering Intern — AGAILE Inc. Jan 2025 – Mar 2025

Delaware, United States

- Prototyped a LangGraph-based question-answering agent using Retrieval-Augmented Generation (RAG)
- Built a crawl-and-index pipeline with Apify, storing embeddings in a Dockerized Milvus vector database

AI Solutions Intern — Segment X Jul 2024 – Dec 2024

St Lucia, QLD

Tutor — The University of Queensland Jul 2023 – Dec 2023

CSS2002 – Programming in the Large (Java) · St Lucia, QLD

SELECTED PROJECTS

LangGraph Software Engineering Agent ↗

- Designed an autonomous coding agent with hierarchical repo understanding: file-level and package-level semantic summaries generated in parallel via LangGraph's fan-out (Send) API
- Implemented issue-resolution workflow that localizes user requests to relevant files before generating a fix, keeping context within token limits

LangGraph + MCP Universal Assistant

- Built a multi-agent router that indexes tools, prompts, and resources from multiple MCP servers into a vector store for dynamic agent selection
- Implemented a generic MCP session wrapper using the Strategy pattern for extensible tool discovery and invocation

LangGraph Retrieval & RAG Pipeline

- Extended LangGraph's retrieval template with configurable multi-hop site crawling and a Milvus-backed vector index; deployed to LangGraph Cloud and connected an assistant-ui chat client

EDUCATION

Bachelor of Engineering (Honours), Software Engineering — The University of Queensland Feb 2022 – Jun 2026

SKILLS

Languages	Python, Java, TypeScript/JavaScript
AI / ML	LangGraph, LangChain, Prompt Engineering, Multi-Agent Systems, Model Context Protocol (MCP), Retrieval-Augmented Generation, PyTorch, TensorFlow
Infrastructure	Docker, Milvus, Apify, LangGraph Cloud / LangSmith, Git & GitHub, React, Node.js
